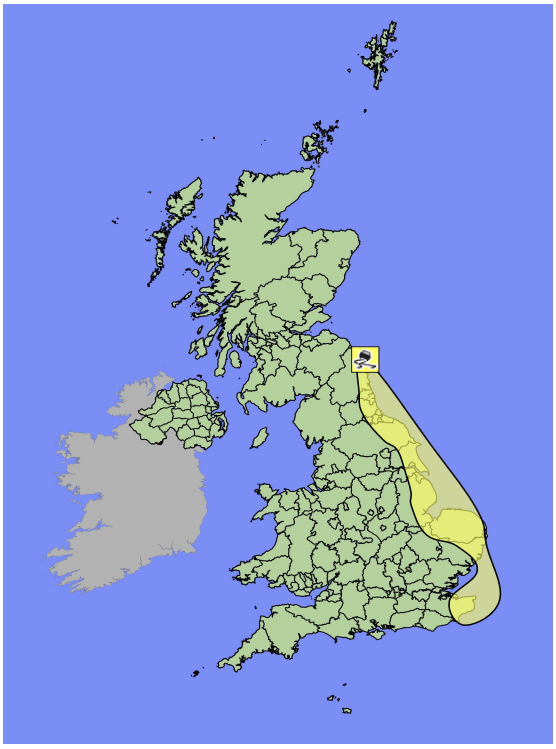
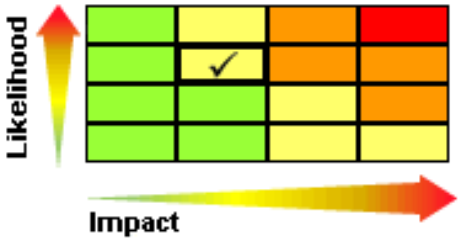
National Severe Weather Warning Service





Chief Forecasters Assessment
Further wintry showers falling onto sub-zero surfaces will lead to tricky conditions, more especially on untreated roads and pavements.

The Met Office have issued a **Yellow Warning** of **Ice**

Valid from **22:20 on Mon, 10th Dec 2012** until **11:00 on Tue, 11th Dec 2012**

Scattered wintry showers will continue across many eastern coastal counties of England, although tending to ease later. With surfaces already below zero, away from the coastline itself, showers will readily freeze to give ice on untreated surfaces. Any heavier showers, these perhaps most likely in North Yorkshire and the far east of Kent, could locally wash away earlier gritting treatment, and additionally may produce a few centimetres of snow just locally on the North York Moors. Elsewhere any snow limited to a dusting.

The public should be aware of increased risk of icy surfaces and difficult travel conditions.
